

CLAIMS

I claim:

- 1 1. A pry bar, comprising:
 - 2 an elongated arcuate lever having a front end, a rear end, a
 - 3 top surface, and a bottom surface, wherein the top surface and
 - 4 the bottom surface converge at the front end to form a sharp tip
 - 5 for wedging the pry bar underneath material that is to be
 - 6 removed;
 - 7 a bifurcated claw disposed along the front end of said lever
 - 8 having a fastener receiving notch extending through the center of
 - 9 the bifurcated claw defining first and second fastener engaging
 - 10 members located on either side of the notch; and
 - 11 a gripping member fixedly secured to the top surface of said
 - 12 lever.
- 1 2. The pry bar according to claim 1, wherein said gripping
- 2 member comprises a handle having a horizontally disposed,
- 3 generally cylindrical rod supported by a pair of support members
- 4 vertically disposed along the top surface of said lever.

1 3. The pry bar according to claim 2, wherein said
2 vertically disposed support members are welded onto the top
3 surface of said lever.

1 4. The pry bar according to claim 1, wherein said lever is
2 a recycled car leaf spring.

1 5. A pry bar, comprising:

2 an elongated arcuate lever having a front end, a rear end, a
3 top surface, and a bottom surface, wherein the top surface and
4 the bottom surface converge at the front end to form a sharp tip
5 for wedging the pry bar underneath material that is to be
6 removed; and

7 a bifurcated claw disposed along the front end of said lever
8 having a fastener receiving notch extending through the center of
9 the bifurcated claw defining first and second fastener gripping
10 members located on either side of the notch.

1 6. The pry bar according to claim 5, wherein said lever is
2 a recycled car leaf spring.

1 7. The pry bar according to claim 5, further comprising a
2 gripping member fixedly secured to the top surface of said lever.

1 8. The pry bar according to claim 7, wherein said gripping
2 member is a handle having a horizontally disposed, generally
3 cylindrical rod supported by a pair of support members vertically
4 disposed along the top surface of said lever.

1 9. The pry bar according to claim 8, wherein said
2 vertically disposed support members are welded onto the top
3 surface of said lever.

1 10. A pry bar, comprising:

2 an elongated arcuate recycled car leaf spring having a front
3 end, a rear end, a top surface, and a bottom surface, wherein the
4 top surface and the bottom surface converge at the front end to
5 form a sharp tip for wedging the pry bar underneath material that
6 is to be removed;

7 a bifurcated claw disposed along the front end of said
8 spring having a fastener receiving notch extending through the
9 center of the bifurcated claw defining first and second fastener
10 gripping members located on either side of the notch; and

11 a gripping member fixedly secured to the top surface of said
12 spring.

1 11. The pry bar according to claim 10, wherein said
2 gripping member is a handle having a horizontally disposed,
3 generally cylindrical rod supported by a pair of support members
4 vertically disposed along the top surface of said lever.

1 12. The pry bar according to claim 11, wherein said
2 vertically disposed support members are welded onto the top
3 surface of said lever.
